GOLD'n GRO Feeds Roots! Potatoes Grown in Pots and Beds

During the 2023 growing season in Reno NV, potatoes were planted in a 7-gallon pot indoors with grow lights. The plants were spindly as they searched for energy. The pot was moved out to a small green house after a few weeks. The plant bushed out and did well. It was very bushy and healthy. A photograph was taken in-situ, including other greenhouse occupants. After the foliage died back and yellowed, the potatoes were harvested. An estimated 3 lb. of 1 to 2 in. tubers were recovered.

Other seeds were planted in 12 by 60 in. planters. The growth medium was very loose with a lot of chips and some soil. The hills were about 15 in. apart. Two hills were harvested as new potatoes and combined with peas. Two other hills were allowed to mature to produce yellow foliage. These hills were harvested, and easily cleaned because of the growth media. These were displayed on a counter and photographed. Total wt. 3.7 lbs. The largest potato was 3 in. in diameter, and 4 in. long. The fertilizers used were GOLD'n Gro 12-0-4 and 8-8-8. They were applied to the soil in a 1oz. to a gal. liquid. The 12-0-4 was applied early in the growth cycle and the 8-8-8 was applied 2 to 3 weeks apart.

If you grow it, we can feed it. Using the contact information above, we invite you to discuss your plant nutrition needs with us. We want to grow with you!!!

GOLD'n GRO liquid multi-nutrient fertilizers were developed and are manufactured by Itronics Metallurgical, Inc., based in Reno, Nevada. Sales and distribution managed by the GOLD'n GRO Division. The full fertilizer line may be viewed at www.GOLDnGRO.com.

The fertilizers are for all crops. They are for both soil and foliar application. Here are some categories for potential users to consider: specialty crops, nurseries, green houses, other Horticultural growers including individual home gardeners, vegetable growers, growers of all categories of trees, vines, and shrubs, and of course all categories of farming. We can feed it if you grow it.

Current package sizes include: 2X2.5-gallon, 55-gallon, 250-gallons in a 275-gallon mini-bulk tote, and full truck loads. Quart and Gallon units planned for 2024.

Many consumers, nurseries, and other specialty growers like the 2X2.5-gallon units. The 55's and bulk totes are also popular with medium-sized and larger growers. The Company has a special program for sale of two fertilizers in one package for economy. For example, a 1X2.5-gallon bottle of GOLD'n GRO 8-8-8+4%S and 1X2.5-gallon bottle of GOLD'n GRO 6-3-9+4%S can be purchased for shipment in one case. Similarly mixed cases can be shipped on one pallet for freight economy.
